

Introducing Maritza

Maritza may be the character you have been looking for! Perfect for kids games and mobile apps.

She is mecanim ready, low poly (15.7K tris) and come with 16 ready to use cute texture expressions!

She is also perfect to customize: with 4 tons of skin, 4 eye colors and 4 hair colors she can have the look you need. It means 64 variations only on skin, eyes and hair colors!

Also included a shirt, pants and shoes, witch one with 3 textures variations.

Thank you for purchasing Maritza! Any comment, suggestion or doubt you have feel free to write us on mistelko@gmail.com.

Maritza Instructions

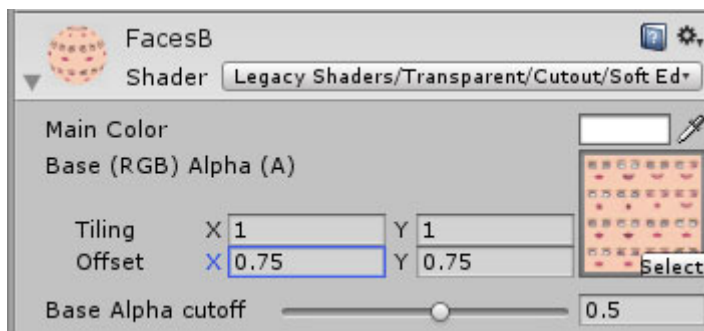

Maritza is really easy to use. On Prefabs folder you will find Maritza prefab, which already is composed of the body, eyes, hair and clothes:

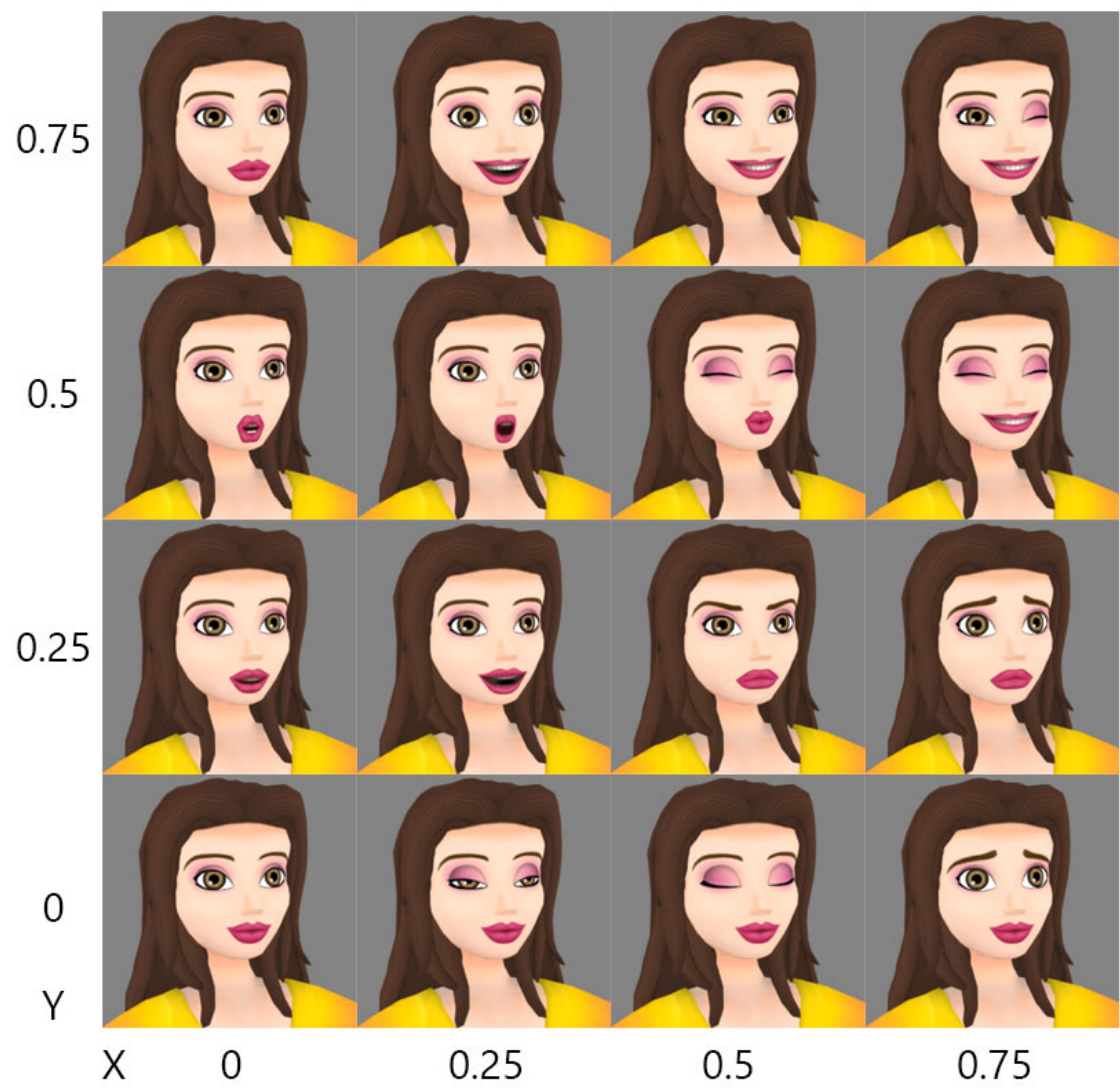

To change any part of her, delete the item you want to change and insert a new one under Maritza object. All prefabs use the Maritza animation controller that is on prefabs folder. If you want to use two or more Maritza models in scene, you will have to create more animation controllers and apply them to every model under the Maritza object. To see how it works please look the Sample Scene folder under the Scenes folder.

Facial Expressions

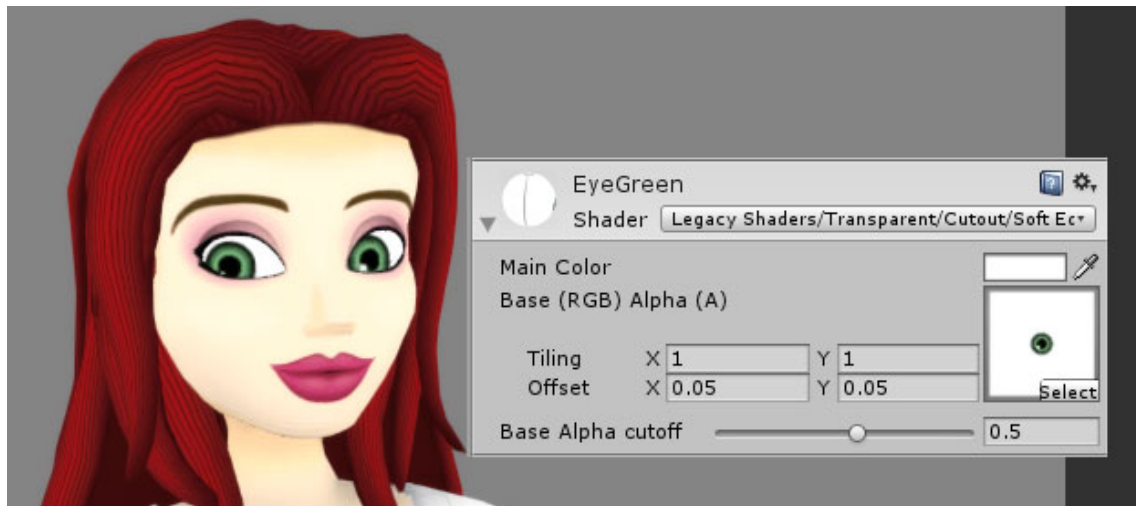

The facial expression is changed altering the offset values of the texture on the Face material configuration. You can find them on Skin folder under Materials folder.

Eyes

To move the eyes alter the X and Y offset values on the Eye material, on Eyes folder under Material folder. The offset range is from -0.1 to 0.1 on X values and from -0.08 to 0.08 on Y values.

That's it! We hope you found Maritza easy to operate and that she may help you making amazing games! Please let us know where you used her sending us screenshots of her in action!

Maritza is a working project and we have big plans for her, as for some other characters that will come. We will release new clothes and accessories on separated packs soon, so tell us what you need. We can work on a personalized pack just for you.
